

## Multi-Location Service

How do you quickly integrate resources and new business opportunities to achieve growth?

When you've grown beyond a single location, or when your employees work from home, your customers need to be able to contact your company easily and efficiently. With our fully integrated national network and diverse customer base, we have the business and technical experience to integrate multiple sites without having to deploy complex new technologies or to duplicate technologies.

We operate a private IP network throughout Ontario, Quebec, and western Canada that allows you to seamlessly connect offices site to site, integrating multiple locations and treating them as though they were one.

Using bluArc's private IP network your phone calls never travel over the Internet, enabling you to seamlessly and securely provide telephone coverage to multiple locations. Integration is simple with voice over Internet protocol (VoIP), connecting both your locations and your employees wherever they are—in the office, at home, or when traveling.

### With VoIP you:

- reduce the cost of connecting multiple locations
- lower your capital expenditure
- provide seamless and professional communications between your employees and your customers.

We are a one-stop-shop for all voice and data communications requirements. Instead of multiple vendors, you have one vendor for all your voice and data needs. With bluArc, you can have a full turnkey multi-site deployment that meets your timelines.
